PLATFORM GUIDE

PUDICA

Integrated Cybersecurity Operations

The operational control plane for governing, protecting, remediating, monitoring, responding, recovering and continuously assuring the digital environment.

PLATFORM PROMISE

One operational system. One trusted operating record. Connected security outcomes.

EXECUTIVE OVERVIEW

Security operations need an operating system

PUDICA coordinates the work across tools, teams and risk decisions without replacing the entire customer

1 Fragmented ownership

Security, IT, risk, application, cloud and recovery teams operate with different context.

2 Findings without closure

Assessment results do not automatically become tested, approved and verified treatment.

3 Recovery separated

Backup success does not prove that trusted business services can be restored.

4 Evidence assembled late

Approvals, tests, changes and outcomes often remain distributed across systems.

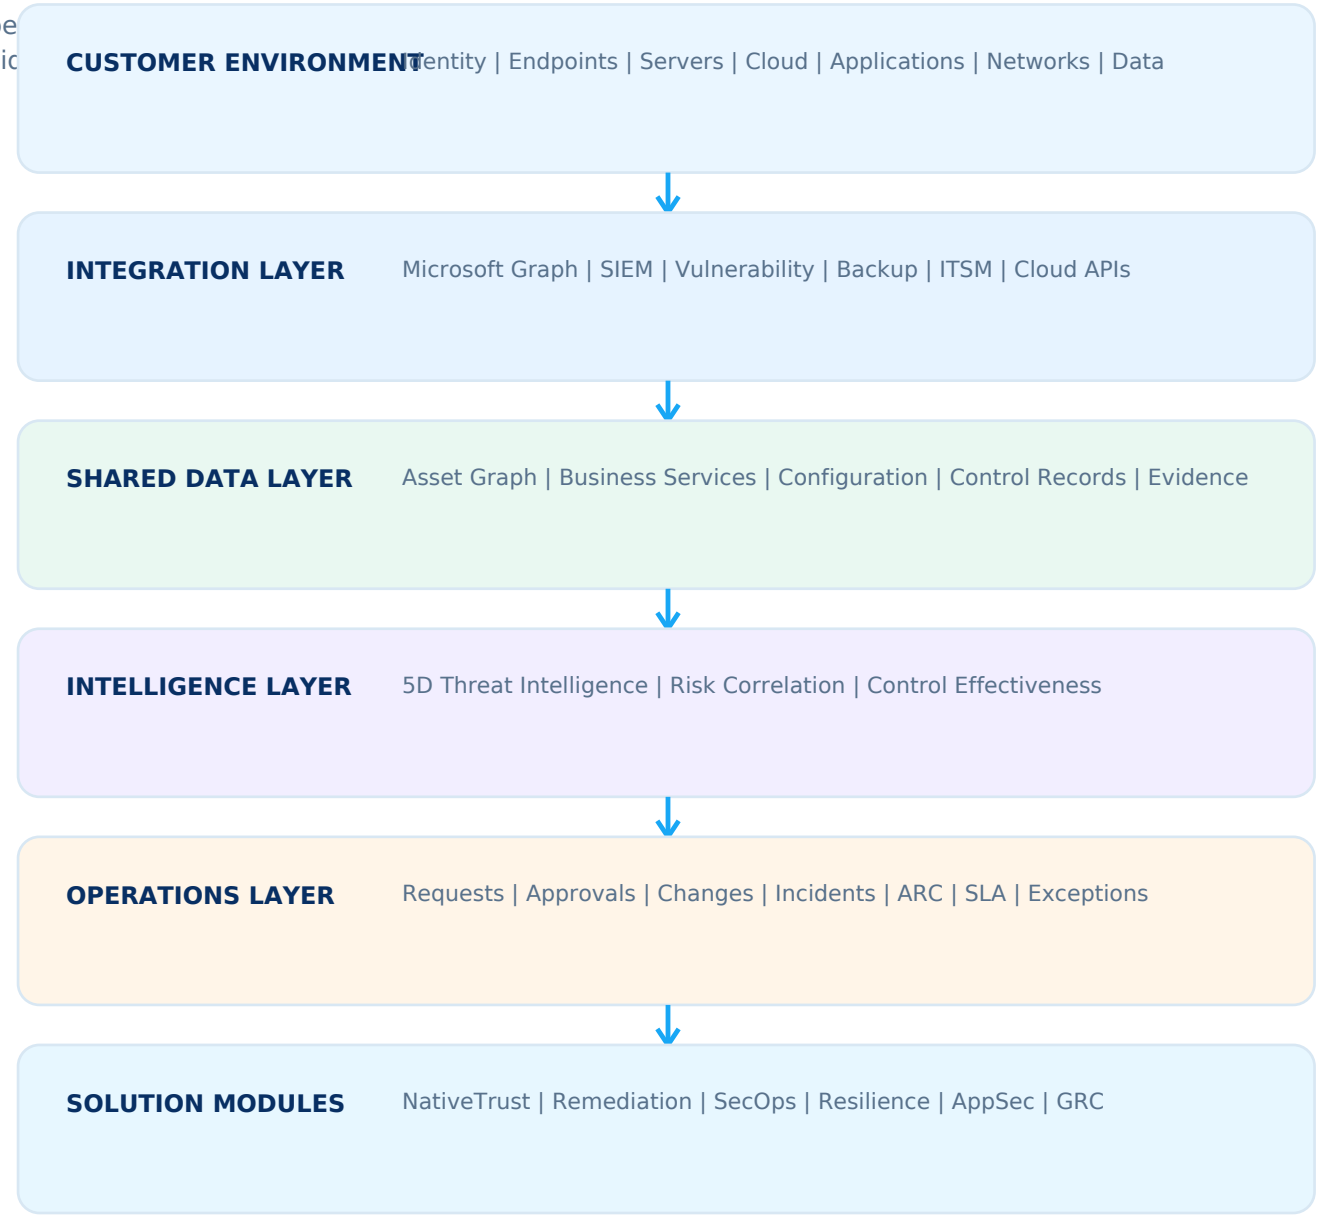

PUDICA RESPONSE

Connect asset context, risk, authority, workflow, validation, execution, monitoring, recovery and assurance through one governed operational

PLATFORM ARCHITECTURE

A shared operating model across the security lifecycle

Spe
evic

CONNECTED SOLUTION MODULES

Six specialized domains. One shared

1 NativeTrust Workspace

Identity, device, application, browser, mobile, update and lifecycle assurance.

hile

2 Autonomous Remediation

Vulnerability, configuration, software, patch and corrective-action operations.

ges,

3 Integrated Security Operations

Telemetry, detection engineering, investigation, incident response and forensics.

4 Autonomous Resilience

Backup governance, restore validation, BCP/DR and trusted recovery.

5 Application Security Governance

Application risk, testing, release authority, runtime monitoring and assurance.

6 GRC & Compliance

Enterprise risk, policies, audits, privacy, evidence and ISO/IEC 27001 operations.

SHARED OPERATIONS FABRIC

Common services power every security

1 Asset Graph

One relationship model across services, identities, devices, applications, findings, risks, incidents and evidence.

2 Service Operations Hub

Requests, findings, incidents, changes, remediation actions, approval tasks, SLAs and ownership.

3 Risk & Control Register

Threats, vulnerabilities, business impact, controls, residual risk, decisions, owners and evidence.

4 Approval & Governance

Authority levels, pre-checks, execution conditions, rollback requirements and verification records.

5 Incident Response Center

Detection, triage, containment, investigation, eradication, recovery and review.

6 ARC Remediation

Context enrichment, treatment recommendation, approval, execution, retest and closure.

7 Evidence Vault

Immutable and traceable evidence tied to the relevant asset, control, decision and outcome.

8 Analytics & Reporting

Executive posture, operational queues, SLA performance, assurance and audit packages.

OPERATIONAL LIFECYCLE

From context to continuous assurance

C sistent workflow turns security intelligence into ved, validated and evidenced operations.

1 **DISCOVER**
Acquire trusted assets, identity, configuration, security and recovery context.

2 **ASSESS**
Correlate threat relevance, business impact, control gaps and dependencies.

3 **DECIDE**
Define treatment, owner, priority, target date and residual-risk path.

4 **PROVE**
Validate effectiveness, compatibility, telemetry, rollback and recovery.

5 **APPROVE**
Record accountable authority, conditions, window and evidence.

6 **EXECUTE**
Implement through an authorized deployment or response mechanism.

7 **VERIFY**
Retest security effectiveness and confirm technical and business health.

8 **ASSURE**
Preserve evidence, report residual risk and improve the baseline.

MODULE SPOTLIGHT

PUDICA NativeTrust Workspace

Inventory & Trust

Common asset identity, ownership, compliance, protection state and relationships.

Provisioning & Lifecycle

Request, register, assign, enroll, configure, operate, reset, retire and dispose.

Update & Exposure

Update rings, software exposure, SLA, exceptions, retesting and closure.

Application & Browser

Trusted apps, URL policy, browser profiles, downloads, extensions and drift.

Protection & Response

Defender, firewall, encryption, EDR, containment, corrective action and recovery.

Mobile Workspace

Enrollment, MAM, app protection, Conditional Access, selective wipe and evidence.

Workspace Assurance

Control scoring, ISO mapping, exceptions, evidence, change success and reporting.

Brand promise: Know the workspace. Establish trust. Govern every change. Resolve every risk. Prove every control.

MODULE SPOTLIGHT

Autonomous Remediation

A complete treatment system for vulnerability, configuration, software, compliance and corrective-action operations.

1. OS Kernel & Base System
2. Middleware & Services
3. Database & Data Platform
4. Enterprise Management & Security
5. Network & Security Edge
6. Standalone Software Packages

INTEGRATED OUTCOMES

Detect, respond, recover and govern through one shared context

e se

1 Integrated SecOps

Telemetry coverage, SIEM onboarding, detection engineering, threat hunting, investigation, incident orchestration and forensics.

CONNECTED BY PUDICA

2 Autonomous Resilience

Backup monitoring, failure workflows, immutable-copy review, restore tests, ransomware scenarios, BCP/DR and recovery evidence.

CONNECTED BY PUDICA

3 Application Security Governance

Application inventory, threat modeling, VAPT, API security, secure release, runtime monitoring and incident response.

CONNECTED BY PUDICA

4 GRC & Compliance

Enterprise risk, policy, ISO/IEC 27001, privacy, vendors, control testing, audit readiness and corrective action.

CONNECTED BY PUDICA

INDEPENDENT PROVING

SecLabs and GoldenVault

SECLABS

Independent proving function

Defines test scope, acceptance criteria, safety boundaries, telemetry, rollback, recovery and evidence.

producti

GOLDENVAULT

Dynamic validation workspace

Provides representative identities, devices, services, applications, policies, telemetry and recovery dependencies.

CORE PRINCIPLE

Test once. Reuse the validated scenario across remediation, monitoring, response, recovery and assurance.

OPEN INTEGRATION ARCHITECTURE

Works with the existing security

1 MICROSOFT

Entra ID | Intune | Defender | Microsoft 365 | Graph | Sentinel | Azure

ecto

2 VULNERABILITY & SECURITY

Tenable | Qualys | EDR/XDR | Scanners | Configuration tools

3 SIEM & MONITORING

Microsoft Sentinel | Splunk | QRadar | Elastic | Other supported platforms

4 CLOUD & INFRASTRUCTURE

Azure | AWS | Google Cloud | VMware | On-premises environments

5 ITSM & COLLABORATION

ServiceNow | Jira Service Management | Microsoft Teams | Email | Webhooks

6 BUSINESS SYSTEMS

ERP | HR | CMDB | Asset management | Finance | Procurement

Connector principle: least privilege, tenant-specific consent, separated read and write permissions, complete API action logging and immediate revocation support.

OPERATIONAL VISIBILITY

PUDICA Command Center

Role-based executive, security, operational, risk and assurance views across the complete lifecycle.

OPERATING RESPONSIBILITY

One platform. Clear responsibility.

Technology providers, PUDICA, V Pilot and the customer each have a defined role in the operating model.

TECHNOLOGY PROVIDERS

- Identity and device platforms
- Policy enforcement
- SIEM and security tools
- Cloud and backup systems

PUDICA DELIVERS

- Unified data model
- Risk and trust scoring
- Workflow and approvals
- Evidence and reporting

5PILOT OPERATES

- Assessment and administration
- Monitoring and triage
- Remediation and response
- Recovery and assurance

CUSTOMER RETAINS

- Business ownership
- Legal accountability
- High-impact authority
- Final risk acceptance

PUDICA supports systematic security control operation and evidence. It does not independently certify a customer or transfer the customer's business, legal or executive accountability.

VPilot
CYBER SOLUTIONS LLP

ADOPTION ROADMAP

Start with visibility. Mature toward integrated operations.

ons

01 **FOUNDATION**

Tenant architecture, connectors, Asset Graph, posture, approvals and Evidence Vault.

02 **OPERATIONS**

Findings, risk register, incidents, changes, SLAs, exceptions and collaboration.

03 **CONTROLLED AUTOMATION**

ARC levels 1-3, treatment catalog, pre-checks, approval, execution, retest and rollback.

04 **UNIFIED ASSURANCE**

SIEM, backup, application security, compliance library, cross-module correlation and executive reporting.

NEXT STEP

Schedule an executive briefing or request a platform demonstration.

vpilot.org

Managed responsibility. Validated execution. Continuous assurance.
